

## INDEXES

### INDEX OF ALGORITHMS

Algorithm	Page
3.1 Stable and accurate summation algorithm	117
6.1 Simple linear regression	175
6.2 Simple linear regression through the fixed point	177
6.3 Orthogonal linear regression	184
6.4 Logarithmic regression	192
6.5 Exponential regression	196
6.6 Power regression	200
7.1 Real roots of the third degree polynomial	214
7.2 Principal stresses in the 3D space	216
7.3 Roots of the third degree polynomial	220
7.4 Roots of the fourth degree polynomial	231
7.5 Finding one real root of polynomial by iteration	234
7.6 Weierstrass method	238

**INDEX OF EXAMPLES**

Example	Page
1.1 Babylonian numerals	16
1.2 Babylonian approximations of the square root of 2	16
1.3 Decimal system	21
1.4 Conversion of a binary number into a decimal number by numerical operations in the decimal system	23
1.5 Conversion of a binary number into a decimal number by numerical operations in the binary system	23
1.6 Conversion of a decimal number into a binary number by numerical operations in the decimal system	25
1.7 Conversion of a decimal number into a binary number by numerical operations in the binary system	26
1.8 Conversion of octal numbers	27
1.9 Conversion of hexadecimal numbers	28
2.1 Conversion of binary coded decimal numbers	30
2.2 Second complement in the binary notation	32
2.3 Second complement in the decimal notation	33
2.4 Signed and unsigned representation of a number	38
2.5 Possible representations and coding of significand	46
2.6 Conversion of integer number 314 in base 10	53
2.7 Conversion of decimal number 0,333 in base 10	54
2.8 Conversion of number 314,333 in base 10	54
2.9 Some characteristic numbers in the half-precision binary format	55
2.10 Some characteristic numbers in the single-precision binary format	57
2.11 Some characteristic numbers in the double-precision binary format	60
2.12 Some characteristic numbers in the extended double-precision binary format	63
2.13 Multiple possible representations in the decimal32 format	73

2.14	Multiple possible representations in the decimal64 format	78
2.15	Multiple possible representations in the decimal32 format	82
3.1	Error in the average of constant and random variables	88
3.2	Rounding to the nearest value	92
3.3	Double-rounding	92
3.4	Conversion of number “0,1”	93
3.5	Error-free representation of a decimal number	94
3.6	Floating-point representation of integer numbers	94
3.7	Propagated error of multiple nested functions	100
3.8	Condition number of a function	102
3.9	Rearranging the formula to avoid the ill-condition	103
3.10	Power rule	104
3.11	Condition number of the square root	105
3.12	Propagated error in adding	108
3.13	Subtractive cancellation	108
3.14	Adding with the error-free weighting constants	109
3.15	Propagated error of the product	111
3.16	Propagated error of the weighted product	112
3.17	Numerical error of the IEEE 754 floating point addition	114
3.18	Numerical error in the natural logarithm	115
3.19	Numerically instable summation algorithms	115
3.20	Comparison of errors in expressions	119
4.1	Discrete random variables	123
4.2	Continuous random variables	125
4.3	Some properties of probability	128
4.4	Population mean of a random variable	138
4.5	Dependent and uncorrelated random variables	141
5.1	Diameter of a ball	162

5.2	Volume of a ball	165
5.3	Comparison of a propagated measured uncertainty and a propagated numerical error in summation	166
5.4	Perimeter of a rectangle	167
5.5	Volume of a room	168
5.6	Area of a triangle	169
6.1	Simple linear regression	174
6.2	Comparison of the simple and the orthogonal linear regression	182
6.3	Logarithmic regression	190
6.4	Exponential regression	194
6.5	Power regression	198
7.1	Application of Descartes' rule of signs to a polynomial	202
7.2	Accuracies of roots of the second degree polynomial	204
7.3	Accuracies of roots of the second degree polynomial (modified)	206
7.4	Finding roots of the third degree polynomial (three real roots)	211
7.5	Finding roots of the third degree polynomial (double real root)	212
7.6	Finding roots of the third degree polynomial (triple real root)	213
7.7	Finding roots of the third degree polynomial (one real root)	218
7.8	Finding roots of the fourth degree polynomial (four real roots)	226
7.9	Finding roots of the fourth degree polynomial (complex roots)	228
7.10	Finding roots of the fourth degree polynomial (two real roots)	230
7.11	Application of the Weierstrass method	236
A.1	Events	240
A.2	Application of the total probability theorem and Bayes theorem	245
A.3	Uniform distribution	246
A.4	Bilinear distribution	247
A.5	Sum of two random variables with binomial distribution	250

## INDEX

### A

Accuracy 88  
 Approximation error 119  
 Arithmetical average 137

### B

Biased integers 33  
 Binary floating-point formats 47  
   - double precision 58  
   - extended double precision 60  
   - half precision floating-point format 51  
   - quadruple precision 63  
   - single precision 55  
 Binary integer formats 36  
   - byte 37  
   - double long integer (128-bits) 40  
   - integer (32-bits) 39  
   - long integer (64-bits) 40  
   - short integer (16-bits) 39

Binomial distributions 249

### C

Constant variables 85  
 Correlation coefficient 146  
 Covariance 140, 141

### D

Decimal floating-point formats 65  
   - decimal32 71  
   - decimal64 76  
   - decimal128 80  
 Decimal integer formats 41  
 Descartes' rule of signs 202

### E

Error 86, 90  
   - in the mean 158  
   - numerical error 90  
   - representation error 92, 113  
   - rounding error 91  
 Event 10, 239  
 Excepted value 135  
 Exponential regression 193

### F

Floating-point formats 42  
   - binary significand 44  
   - decimal significand 45

### L

Linear regression 171  
   - in multiple variables 178, 185  
   - orthogonal 179, 185

Logarithmic regression 189

### M

Mean 137  
 Method error 118

### N

Negative integer 31  
 Newton method 233  
 Normal distribution 154  
 Numbers in digital computers 29  
   - binary coded decimal (BCD) 30  
   - densely packed decimal (DPD) 31  
 Numeral systems 11  
   - binary system 22  
   - conversion 23, 24  
   - decimal system 21  
   - hexadecimal system 27  
   - octal system 26  
 Numerical instability 115

### P

Polynomial regression 187  
 Polynomials 201, 203, 206, 222  
 Power regression 197  
 Probability 243  
   - density 130  
   - distributions 129, 154, 246, 249  
   - function 131  
 Propagation of numerical error 97  
   - multiple variables 107  
   - single variable 104  
 Propagation of uncertainty 163  
   - function of single variable 165  
   - multiple variables 166

### R

Random errors 153  
 Random process 121, 122  
 Randomisation 170  
 Regression 171

### S

Sampling 132  
 Second complement 29  
 Standard deviations 145, 159

### U

Uncertainty 86, 153, 159

### V

Variance 142

### W

Weierstrass method 235
