INDEX OF ALGORITHMS

Algorithm		Page
1.1	Newton's root-finding method	25
1.2	Halley's root-finding method	27
1.3	Householder's root-finding method of the 3rd order	30
1.4	Secant root-finding method with maximal accuracy	33
1.5	Müller's root-finding method with prescribed accuracy	38
1.6	Inverse quadratic interpolation with maximal accuracy	41
1.7	Modified secant method with maximal accuracy	44
1.8	Bisection root-finding method with prescribed absolute accuracy	49
1.9	Bisection root-finding method with a prescribed relative accuracy	50
1.10	Dekker's root-finding method with absolute accuracy	53
1.11	Brent's root-finding method	56
1.12	False position method	59
1.13	Ridder's root-finding method	62
1.14	Modified false position method	64
1.15	Illinois algorithm with simple improvements	68
1.16	Newton-Raphson division	73
1.17	Finding a square root with the Babylonian/Heron method	75
1.18	Finding a square root with the optimised Babylonian/Heron method	77
2.1	Gaussian elimination	110
2.2	Gaussian elimination with row pivoting	116
2.3	Calculating the determinant with Gaussian elimination	124
2.4	Crout reduction	132
2.5	Crout LU decomposition	143
2.6	Solving a linear equation system **LUX** = **b**	145

2.7	Cholesky–Banachiewicz decomposition	150
2.8	Cholesky–Crout decomposition	150
3.1	SEM without pivoting	176
3.2	SEM subroutine in ANSI FORTRAN	177
3.3	SEM functions in ANSI C	180
3.4	Main program in ANSI FORTRAN	186
3.5	Main function in ANSI C	187
3.6	SEM with row pivoting	201
3.7	SEM with row pivoting in ANSI FORTRAN	203
3.8	SEM with row pivoting in ANSI C	206
3.9	Determinant with SEM and row pivoting	209
4.1	Allocating memory and initialising global variables	227
4.2	Locating an index in the list	228
4.3	Adding an index to the list	229
4.4	Removing an index from the list	230
4.5	Changing the negative index to the positive index	231
4.6	Removing the column and the row (two functions)	234
4.7	Finding row/column of the variable x_i	236
4.8	Finding row/column for variables z_i / y_i	238
4.9	Getting row and column (two functions)	239
4.10	The first phase, adding equation coefficients	240
4.11	The second phase, elimination (two functions)	242
4.12	Closing equation	243
4.13	Removing equation	244
4.14	Preparing the solution	245
4.15	Setting known variable	246
4.16	Getting unknown variable	247

INDEX OF EXAMPLES

Example		Page
	Some mathematical symbols	12
1.1	Finding a square root with Babylonian/Heron method	15
1.2	Application of fixed-point iteration to the function	21
1.3	Application of Newton's method to the polynomial equation	24
1.4	Application of Halley's method to the polynomial equation	27
1.5	Application of the 3rd order Householder's method to the polynomial equation	29
1.6	Application of the secant method to the polynomial equation	32
1.7	Divergence of the secant method	34
1.8	Finding a square root with the optimised Babylonian/Heron method	77
1.9	Finding a square root with Halley's method	79
1.10	Square root found with the 3rd order Householder's method	80
1.11	Cubic root finding with Halley's method	83
1.12	Null-lines of the function of two arguments	84
1.13	The real solution of the equation system	85
1.14	Equation system without a real solution	86
1.15	Multidimensional Newton's method	90
2.1	Application of rules for finding solution of a linear equation system	96
2.2	Finding an inverse matrix	98
2.3	Finding a solution from the inverted matrix	99
2.4	Laplace's expansion rules	102
2.5	Calculation of a determinant by manipulations with rows	103
2.6	Calculation of eigenvalues	104

2.7	Crammer's rule	105
2.8	Gaussian elimination	108
2.9	Gaussian elimination with row pivoting	114
2.10	Calculating the determinant with Gaussian elimination	123
2.11	LU decomposition of a 3×3 matrix	141
2.12	Crout LU decomposition of a 3×3 matrix	142
2.13	Solving a linear equation system with LU decomposition	144
2.14	Matrix inversion with LU decomposition	147
2.15	LU decomposition of a 3×3 symmetric, positive-definite matrix with real coefficients	149
2.16	LDL^T decomposition of a 3×3 matrix	152
3.1	SEM without pivoting	161
3.2	SEM without pivoting applied to a linear equation system of five equations	171
3.3	Memory utilisation	175
3.4	SEM with pivoting	195
4.1	Memory requirements	220

INDEX

B
Babylonian/Heron method, 74
back substitution, 220
bisection method, 47
Brent's method, 55
C
Cholesky decomposition, 148
Crammer's rule, 104
Crout reduction, 129
- Crout LU decomposition, 142
D
Dekker's method, 51
determinant, 100, 121, 209
E
eigenvalues, eigenvectors, 103
F
false position method, 57
- Modified false position method, 63
fixed point iteration, 21
- multidimensional, 87
G
Gaussian elimination, 105
Gauss-Jordan elimination, 125
Gauss-Newton method, 91
Gauss-Seidel method, 155
H
Halley's method, 25, 78, 81, 83
Householder's method, 28, 80, 82
I
Illinois algorithm, 65
improved sequential substitution (ISS), 211
inverse matrix, 97
inverse quadratic interpolation, 39
inverse square-root methods, 81
J
Jacobi method, 154
L
least squares, 153
LU decomposition, 141
M
matrix inversion, 118, 127, 140, 146
Müller's method, 36
N
Newton's method, 22, 82
- multidimensional, 88
Newton-Raphson
- division, 69
- inverse square-root, 81
numerical operations, 170
P
pivoting, 111, 247
- row pivoting, 112, 189
R
Ridder's method, 60
required memory, 171, 219
S
secant method, 30
- modified secant method, 42
sequential substitution (SS), 133
sequential elimination method (SEM), 157
sparing a computer memory, 138
square-root methods, 74
- Babylonian/Heron method, 74
- Halley's method, 78
- Householder's method, 80
- inverse square-root method, 81
- Newton-Rapson method, 81
- Halley's method, 81
- Householder's method, 82
Steffensen's method, 35
